TRAVEL WEBSITE

Wander World

MSE-2 Project Presentation

Presented by: Shruti Sharma
B.Tech Information Technology I
KIET

The WanderWorld home page brings destinations, packages and booking into one travel experience.

Made with GAMMA

01 · PROJECT INTRODUCTION

Make package discovery easier.

WanderWorld is a front-end travel website that helps visitors discover destinations, compare tour packages and plan their next trip.

Compare

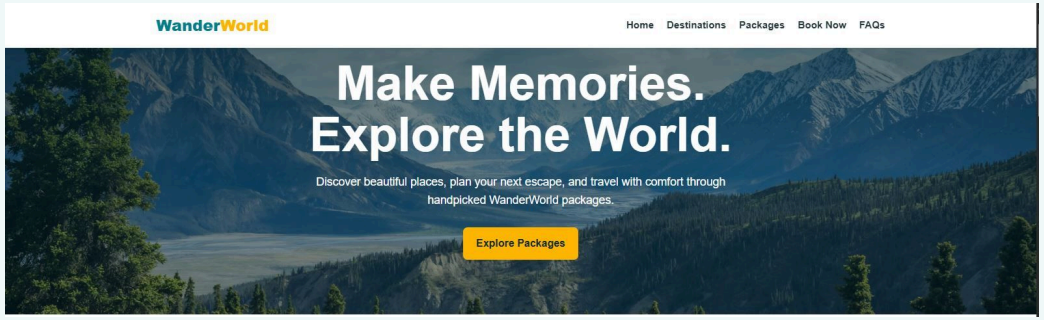

Review package prices, duration and included facilities.

Enquire

Submit visitor and trip details through the form.

Estimate

JavaScript validates the form and calculates estimated package cost.

Evidence: the landing page introduces the product and directs visitors toward packages.

Made with GAMMA

Navigation turns destinations into a clear journey.

- Navigation links connect the main website sections.
- Destination cards feature Manali, Goa and Jaipur; each combines an image, destination name and attractions.
- CSS controls the layout, colours, cards and hover effects.

Evidence: destination browsing, navigation and the visual card system work together.

Made with GAMMA

03 · TRAVEL PACKAGES

Three packages make the choice concrete.

Each card pairs a destination with a clear price, duration and listed facilities.

Mountain Escape · Manali

₹8,500 per person · 4 days / 3 nights

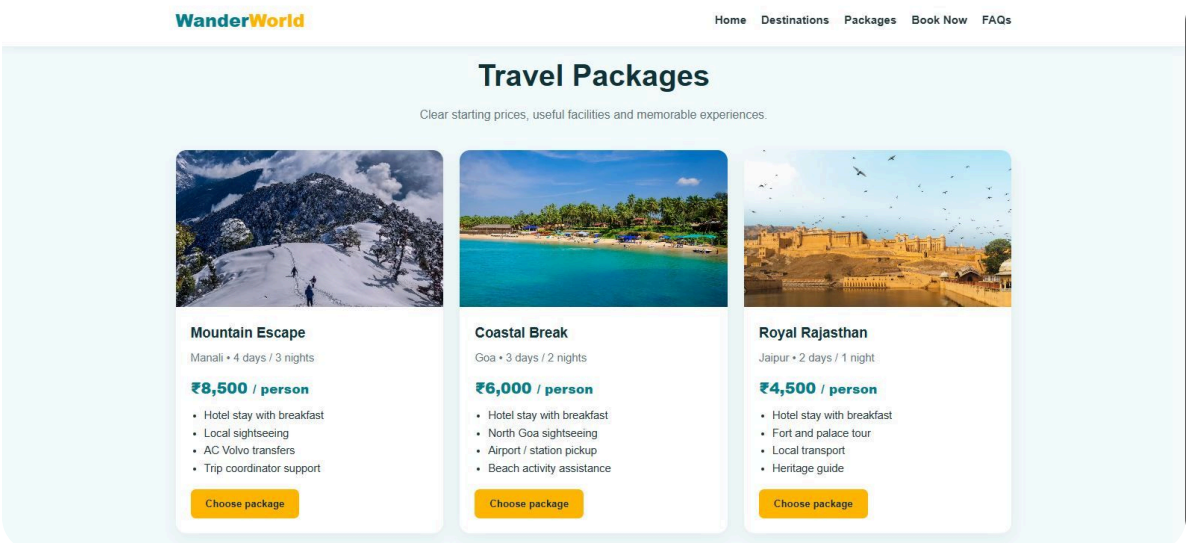

Coastal Break · Goa

₹6,000 per person · 3 days / 2 nights

Royal Rajasthan · Jaipur

₹4,500 per person · 2 days / 1 night

Facilities include accommodation, meals, transport or sightseeing as listed.

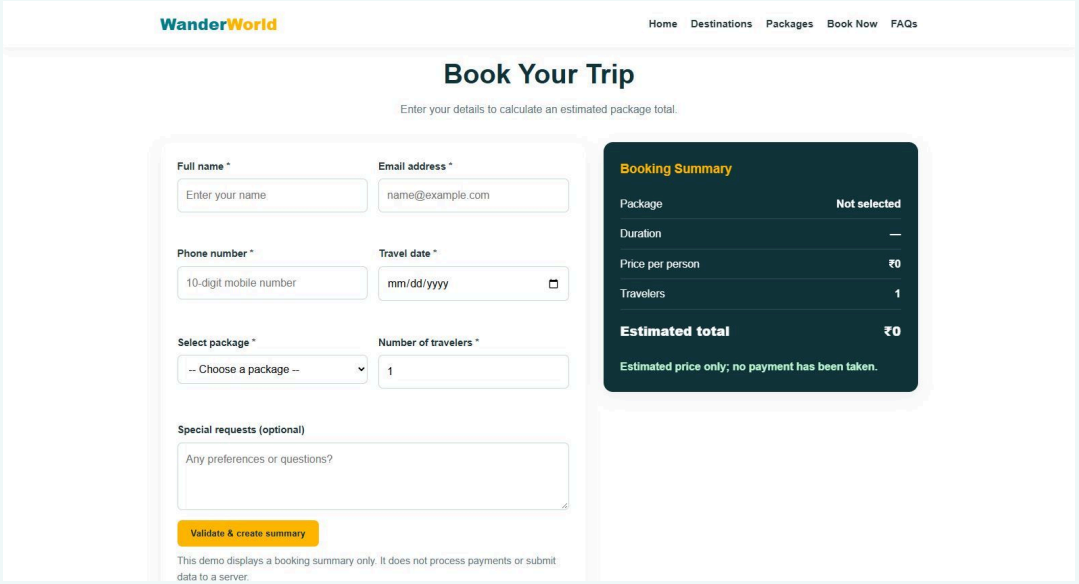

Evidence: package cards expose the information needed

Made with GAMMA

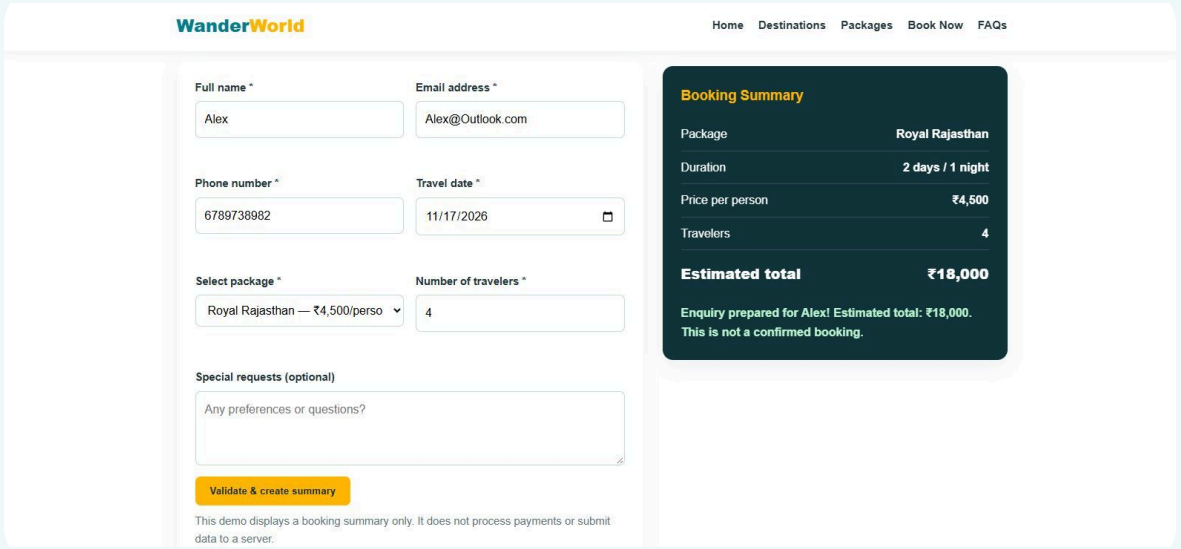

04 · BOOKING LOGIC

From package choice to live estimate

- **Collect:** name, email, phone, package, traveler count.
- **Validate:** required fields, email, mobile number, traveler range.
- **Calculate:** JavaScript package object supplies price per person; estimated total = price per person × traveler count.
- **Update:** DOM methods update the booking summary.

Form fields and package selection.

DOM-updated booking summary.

Made with GAMMA

05 · INTERACTIVE OUTPUT

Small interactions make the prototype feel responsive.

Choose Package

Buttons preselect a package in the booking form.

Booking summary

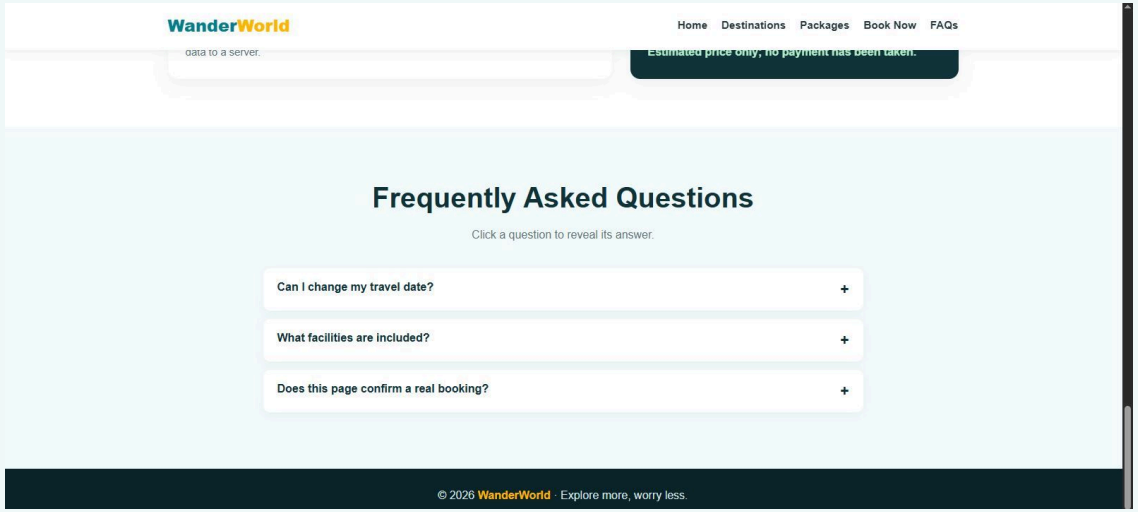

Package, duration, travelers and estimated total appear together.

FAQ reveal

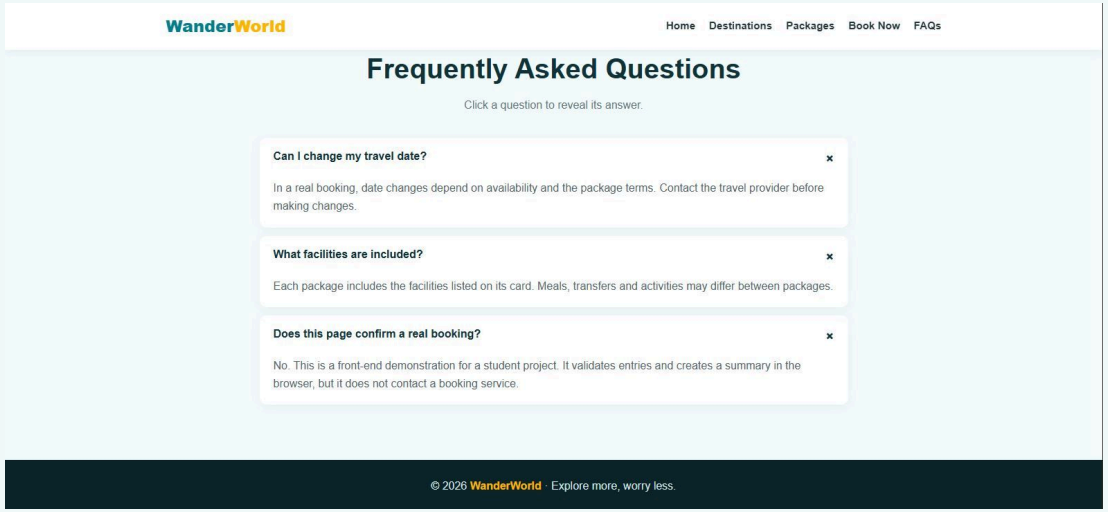

A JavaScript button reveals the answer.

Success message

Valid submission confirms the interaction.

The selected package flows into the summary.

The FAQ answer appears on demand.

Made with GAMMA

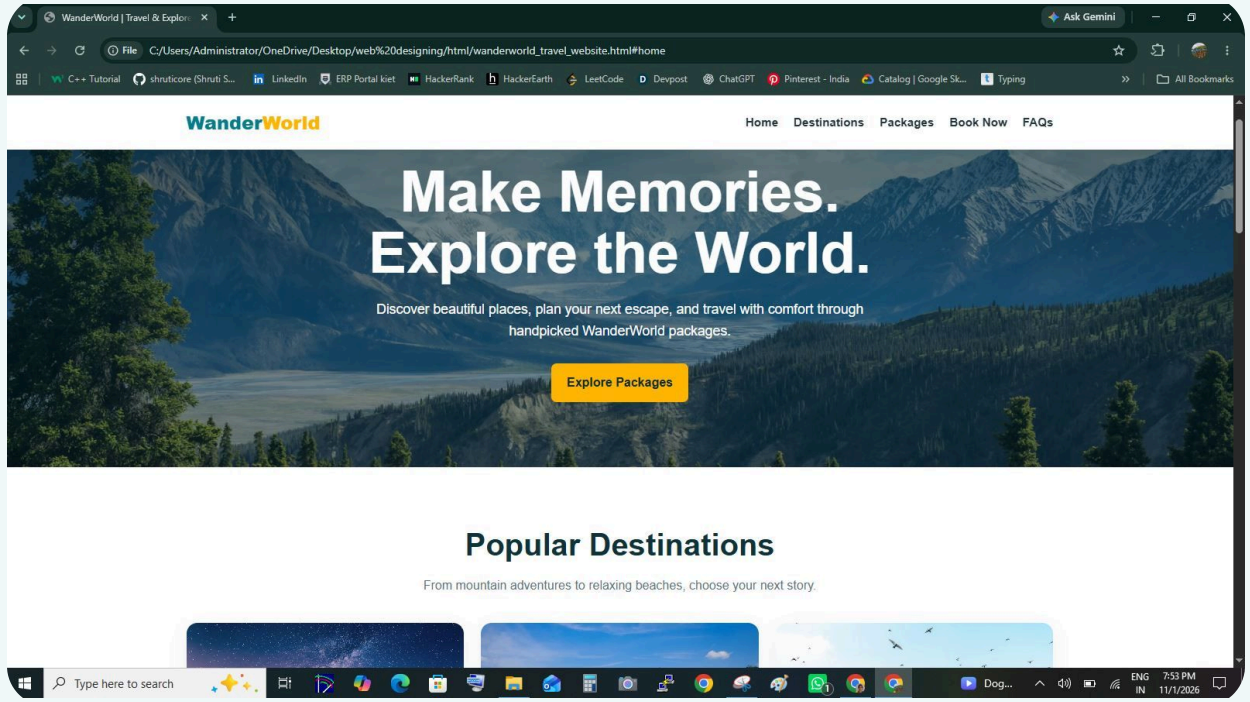

06 · CONCLUSION

From interface to interaction.

WanderWorld combines HTML structure, CSS styling and JavaScript behaviour in one multi-section travel website.

The project practised page structure, visual styling, DOM manipulation and form validation.

Thank you!

Evidence: the finished website brings the browsing and booking journey together.

Future scope

Database, user accounts, live availability and secure payments.
